▲□▶ ▲□▶ ▲ ■▶ ▲ ■ ● の Q @

Twin Pillars of XX-century Physics

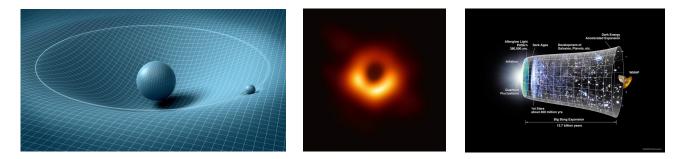

Quantum (field) theory

Elementary particles and their fundamental interactions (excluding gravity)

General relativity

Gravity: planetary orbits, black holes and the evolution of the entire universe itself

The fundamental forces of Nature are ostensibly described by two distinct frameworks

◆□▶ ◆□▶ ◆豆▶ ◆豆▶ = 三 のへで

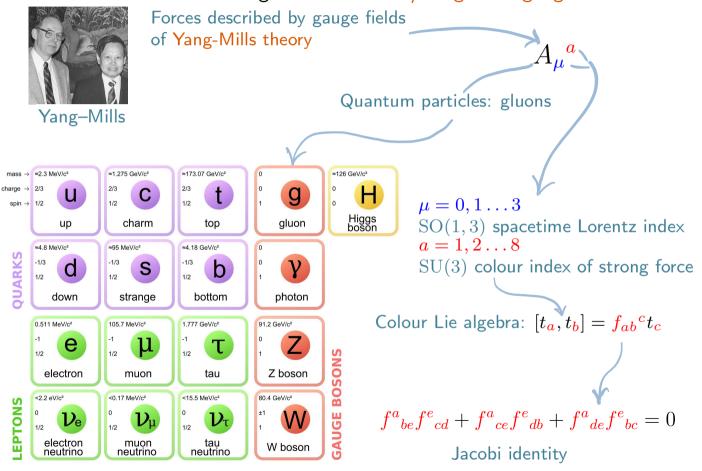

The Standard Model of Particle Physics

- See Konrad's notes!

(日)

SQ (2)

The electroweak and strong forces: Maxwell/Yang–Mills gauge theories

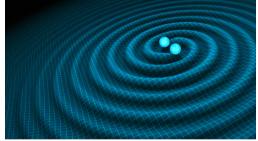

General Relativity

- The Standard Model plays out on fixed stage of spacetime
- Gravity is the stage itself: gravity is geometry

 $g_{\mu
u}$ Perturbations/quanta

Classical gravity waves Quantum particles: gravitons

2017 Nobel: gravity waves detected LIGO/VIRGO

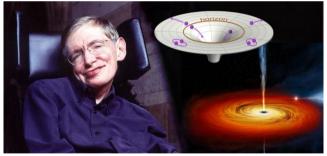

A Schism in the Fundamental Forces of Nature

General relativity is naively incompatible with quantum theory

Diverges at two loops [Goroff-Sagnotti '85]

Black holes challenge the very foundations of quantum theory

Hawking radiation appears to violate unitarity [Hawking '74]

The problem of quantum gravity - can the forces be reunited?

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ のへで

Gravity and gauge theory

Gravity as a gauge theory:

 Gauge theory of Lorentz, (super) Poincaré or de Sitter symmetries [Utiyama '56; Kibble '61; MacDowell-Mansouri '77; Chamseddine-West '77; Stelle-West 79]

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ シ۹00

Holographic principle - AdS/CFT correspondence ['t Hooft '93; Susskind '94; Maldacena '97]

Gravity and gauge theory

Gravity as a gauge theory:

 Gauge theory of Lorentz, (super) Poincaré or de Sitter symmetries [Utiyama '56; Kibble '61; MacDowell-Mansouri '77; Chamseddine-West '77; Stelle-West 79]

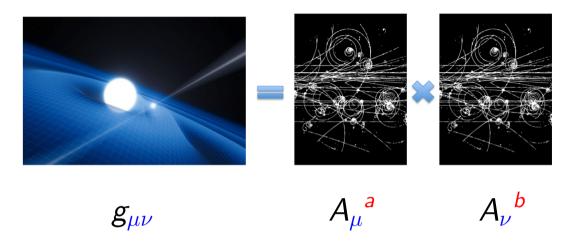

Holographic principle - AdS/CFT correspondence ['t Hooft '93; Susskind '94; Maldacena '97]

Here, we appeal to a third and (superficially) independent perspective:

 $Gravity = Gauge \times Gauge$

▲□▶ ▲□▶ ▲ ■▶ ▲ ■ ● の Q @

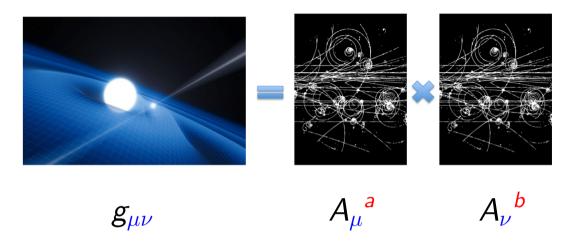

$\mathsf{Gravity} = \mathsf{Gauge} \times \mathsf{Gauge}$

- Is gravity the double copy of the other fundamental forces of Nature?
- Long history, many guises [Feynman, Papini, Kawai–Lewellen–Tye, Bern, Hodges...]

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● の へ ⊙

$\mathsf{Gravity} = \mathsf{Gauge} \times \mathsf{Gauge}$

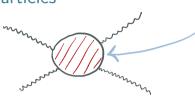

- Is gravity the double copy of the other fundamental forces of Nature?
- Long history, many guises [Feynman, Papini, Kawai–Lewellen–Tye, Bern, Hodges...]
- Renaissance: Colour–Kinematics (CK) duality conjecture and double copy of gauge theory and gravity scattering amplitudes [Bern-Carrasco-Johansson '08, '10; Bern-Dennen-Huang-Kiermaier '10]

Scattering Amplitudes

 \rightarrow Physical observables tested at particle accelerators (e.g. Large Hadron Collider) Non-interacting in/out particles

 $\mathcal{A}^4_{\mathsf{gluons}}$

Interaction region

Scattering Amplitudes

◆□▶ ◆□▶ ◆三▶ ◆三▶ ●□ ◆○◆

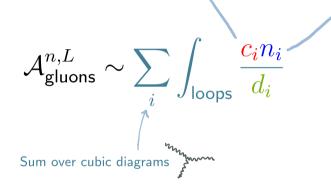

Colour–Kinematics Duality

Amplitude for gluons to scatter (very) schematically:

Colour numerators $c \sim f_{ab}{}^c f_{cd}{}^e \cdots$ colour/gauge group data of gluons

Kinematic numerators $n \sim \varepsilon_{\mu} p^{\mu} \cdots$ polarisation and momentum data of gluons

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ のへで

Colour–Kinematics Duality

Amplitude for gluons to scatter (very) schematically:

Colour numerators $c \sim f_{ab}{}^c f_{cd}{}^e \cdots$ colour/gauge group data of gluons

Kinematic numerators $n \sim \varepsilon_{\mu} p^{\mu} \cdots$ polarisation and momentum data of gluons

Kinematic Jacobi identity

Bern-Carrasco-Johansson CK duality conjecture 2008:

 $\mathcal{A}_{\mathsf{gluons}}^{n,L} \sim \sum_{i} \int_{\mathsf{loops}} \frac{c_i n_i}{d_i}$

Sum over cubic diagrams

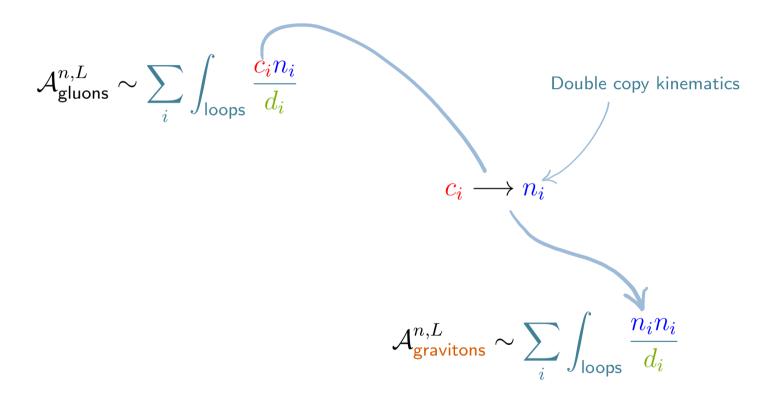

Jacobi identity $c_i + c_j + c_k = 0 \implies n_i + n_j + n_k = 0$

Proven at tree level (zeroth order in ħ)

Conjectured at loop level (but see later!) with highly non-trivial examples

The Double Copy Prescription

Assuming CK duality is realised, gravity comes for free:

'Gluons for (almost) nothing, gravitons for free' JJ Carrasco

Implications and Applications

Computationally powerful: facilitates previously intractable calculations

- Miraculous cancellations: perturbatively finite quantum field theory of gravity?
- Black holes collisions and gravity wave astronomy: pushing the precision frontier

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● の へ ⊙

Implications and Applications

Computationally powerful: facilitates previously intractable calculations

- Miraculous cancellations: perturbatively finite quantum field theory of gravity?
- Black holes collisions and gravity wave astronomy: pushing the precision frontier

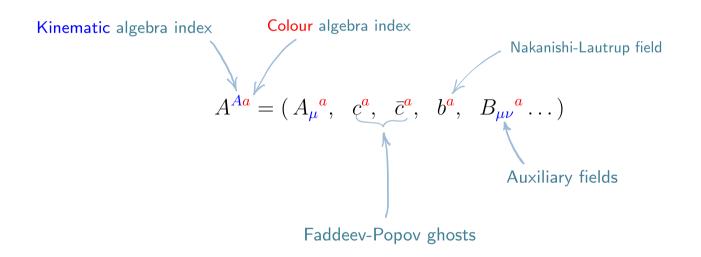

Conceptually provocative: is gravity really the square of gauge theory?

- Does CK duality and the double copy actually hold?
- What is CK duality?
- Can it be taken beyond amplitudes?

 \longrightarrow Lift CK duality and double copy to field theory?

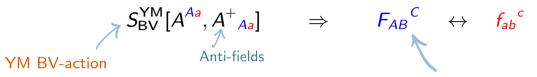

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ∽ � ♥

Introduce field theory realisation of CK duality the double copy [LB-Hughes-Duff-Nagy '14; Anastasiou-LB-Hughes-Duff-Nagy '14, 18'...]

Yang–Mills theory

Classical Yang–Mills action

s action

$$S_{\text{classical}}^{\text{YM}} := \frac{1}{2g^2} \int \text{tr} F \wedge \star F$$

$$= \int d^d x \left\{ -\frac{1}{4} F_{a\mu\nu} F^{a\mu\nu} \right\}$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のへで

$$F := dA + A \wedge A, \qquad F^{a}_{\mu\nu} \coloneqq \partial_{\mu}A^{a}_{\nu} - \partial_{\nu}A^{a}_{\mu} + f_{bc}{}^{a}gA^{b}_{\mu}A^{c}_{\nu}, \quad A = gA^{a}_{\mu}dx^{\mu} \otimes t_{a}$$

Invariant under gauge transformations

 $\delta_{\theta} A = \nabla \theta = d\theta + [A, \theta], \qquad (\nabla_{\mu} \theta)^{a} = \partial_{\mu} \theta^{a} + g f_{bc}{}^{a} A^{b}_{\mu} \theta^{c}$

Expanding:

$$S_{ ext{classical}}^{ ext{YM}} \sim \int \mathrm{d}^d x \left\{ A (\Box - \partial \partial) A + g A A \partial A + g^2 A A A A
ight\}$$

• Kinematic operator $(\Box - \partial \partial)$ has kernel

Yang–Mills theory

• Gauge fix using BRST formalism $\theta \to c$, $Q^2 = 0$:

$$QA = \nabla c, \quad Qc = [c, c], \quad Q\bar{c} = b, \quad Qb = 0$$

with gauge-fixing fermion $\Psi = -\text{tr}\bar{c}(\frac{\xi}{2}b - G[A])$:

$$\begin{split} S_{\rm BRST}^{\rm YM} &= S_{\rm classical}^{\rm YM} + \int \star Q \Psi \\ &= \int {\rm d}^d x \left\{ -\frac{1}{4} F_{a\mu\nu} F^{a\mu\nu} - \bar{c}_a \partial^\mu (\nabla_\mu c)^a + \frac{\xi}{2} b_a b^a + b_a \partial^\mu A^a_\mu \right\} \end{split}$$

 Physical states in Q-cohomology —> asymptotic Hilbert space with unitary S-matrix

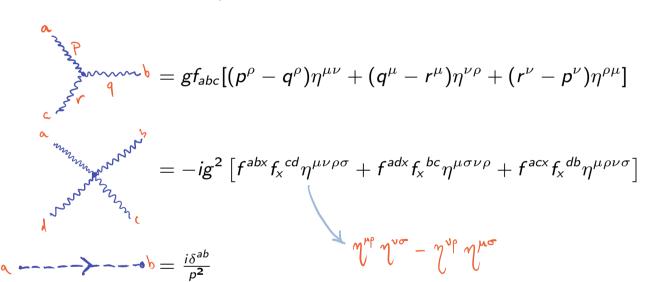

Extended psuedo-Hillbert BRST space

 $A_{
m phys}, \quad A_{
m forward}, \quad A_{
m backward} \equiv b, \quad c, \quad ar{c}$

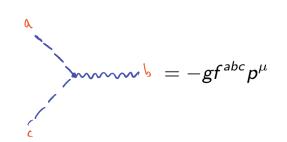

Yang–Mills Feynman diagrams

Functionally varying $\frac{\delta^n S}{(\delta A)^n}|_{A=0}$ for *n*-point Feynman rules (Feynman gauge):

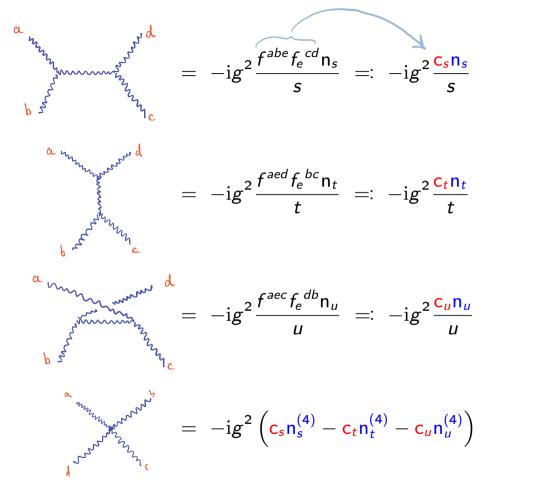

$$\mathbf{a} \cdot \mathbf{p} = -\frac{i\eta_{\mu\nu}\delta^{ab}}{p^2}$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ ● 三 のへで

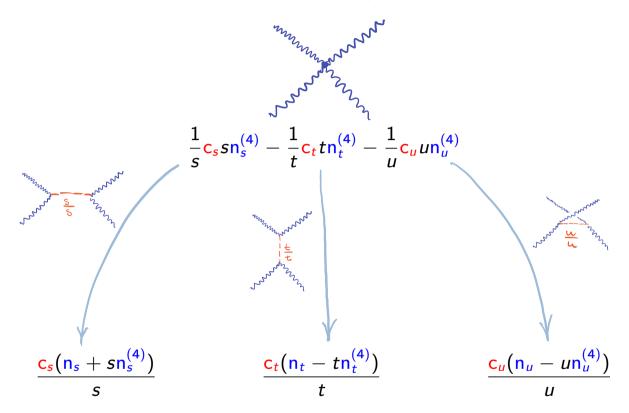

Tree-level 4-point colour-kinematics duality

 $\mathbf{n}_{s} = 4 \left[(\varepsilon_{1} \cdot p_{2}) \varepsilon_{2} - (\varepsilon_{2} \cdot p_{1}) \varepsilon_{1} + \frac{1}{2} (\varepsilon_{1} \cdot \varepsilon_{2}) p_{12} \right] \cdot \left[(\varepsilon_{3} \cdot p_{4}) \varepsilon_{4} - (\varepsilon_{4} \cdot p_{3}) \varepsilon_{3} + \frac{1}{2} (\varepsilon_{3} \cdot \varepsilon_{4}) p_{34} \right]$

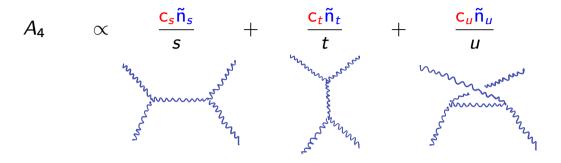

Tree-level 4-point colour-kinematics duality

▲□▶ ▲□▶ ▲ 国▶ ▲ 国▶ ▲ 国 ● のへで

Tree-level 4-point colour-kinematics duality

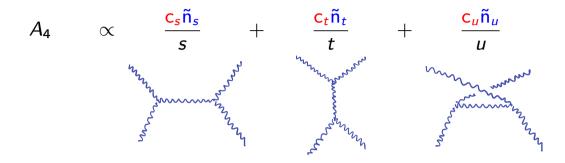

Amplitude now sum over purely trivalent diagrams:

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ ● ○ ○ ○ ○ ○

Tree-level 4-point colour-kinematics duality

Amplitude now sum over purely trivalent diagrams:

• Obvious (by Jacobi): $c_s - c_t - c_u = 3f^{ea[b}f_e^{cd]} = 0$

Exercise: show that [Zhu '80]

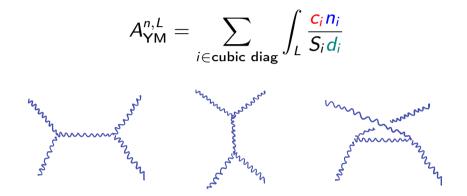

$$\tilde{n}_s - \tilde{n}_t - \tilde{n}_u = 0$$

Hint: Recall $p_i \cdot \varepsilon_i(p_i, q_i) = p_i^2 = 0$ and there is freedom in the choice of reference vectors q_i

Kinematics appears to be playing by the same rules as the colour!

Amplitudes and cubic diagrams

Can write n-point L-loop gluon amplitude in terms of only cubic diagrams:

 \triangleright c_i: colour numerator, built from f^{abc} , read off diagram i

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ のへで

• d_i : propagator, $\prod_{int. \ lines} p^2$, read off diagram i

Amplitudes and cubic diagrams

Can write n-point L-loop gluon amplitude in terms of only cubic diagrams:

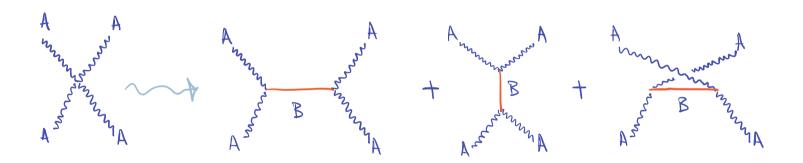

▲□▶ ▲□▶ ▲目▶ ▲目▶ 目 のへで

Amplitudes and cubic diagrams

Can be realised in the YM Lagrangian through auxiliary fields:

$$g^{2}[A_{\mu}, A_{\nu}][A^{\mu}, A^{\nu}] \longrightarrow \frac{1}{2}B^{\mu\nu\kappa} \Box B_{\mu\nu\kappa} - g\frac{1}{\sqrt{2}}\partial^{\kappa}B_{\kappa\mu\nu}[A^{\mu}, A^{\nu}]$$
[Bern-Dennen-Huang-Kiermaier '10]
$$\varepsilon \sim \lim_{\lambda \in D} \Im [A, A]$$

Amplitudes and cubic diagrams

Feynman diagrams give 'cubic' amplitudes directly:

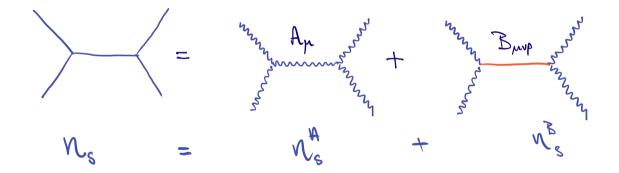

$$A_{\rm YM}^{n,L} = \sum_{\alpha \in {\rm Feynman \ diag}} \int_{L} \frac{c_{\alpha} n_{\alpha}}{S_{\alpha} d_{\alpha}} = \sum_{i \in {\rm cubic \ diag}} \int_{L} \frac{c_{i} n_{i}}{S_{i} d_{i}}$$

 $\sum n_i^{\varphi}$

3

990

Example: 4-point *s*-channel diagram

BCJ colour-kinematic duality conjecture

▶ There is an organisation of the *n*-point *L*-loop gluon amplitude:

$$A_{\mathrm{YM}}^{n,L} = \sum_{i \in \mathrm{cubic\ diag}} \int_L rac{c_i n_i}{S_i d_i}$$

such that

$$\begin{array}{ccc} c_i + c_j + c_k = 0 & \Rightarrow & n_i + n_j + n_k = 0 \\ c_i \longrightarrow -c_i & \Rightarrow & n_i \longrightarrow -n_i \end{array}$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

[Bern-Carrasco-Johansson '08]

BCJ colour-kinematic duality conjecture

There is an organisation of the n-point L-loop gluon amplitude:

$$\begin{array}{ccc} \text{Colour Jacob}, & A_{\text{YM}}^{n,L} = \sum_{i \in \text{cubic diag}} \int_{L} \frac{c_{i} n_{i}}{S_{i} d_{i}} & \text{kinematic Jacob}, \\ \text{such that} & & \\ \hline c_{i} + c_{j} + c_{k} = 0 & \Rightarrow & n_{i} + n_{j} + n_{k} = 0 \\ c_{i} \longrightarrow -c_{i} & \Rightarrow & n_{i} \longrightarrow -n_{i} \end{array}$$

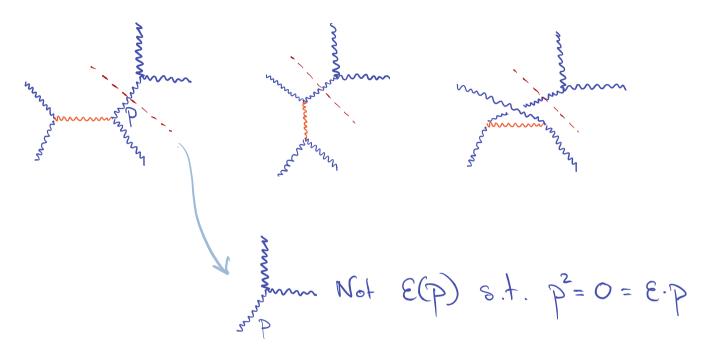

[Bern-Carrasco-Johansson '08]

CK duality established at tree-level

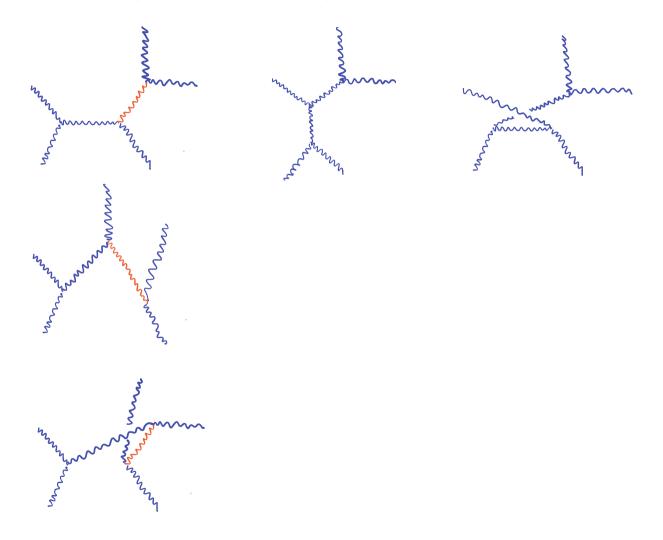

[Stieberger '09, Bjerrum-Bohr–Damgaard–Vanhove '09; Mizera '19; Reiterer '19]

Significant evidence up to 4 loops in various (super)YM theories [Carrasco–Johansson '11; Bern–Davies–Dennen–Huang–Nohle '13; Bern-Davies-Dennen '14...]

 Quickly becomes difficult to check: remains conjectural at the loop level [Bern–Carrasco–Chen–Edison–Johansson–Parra-Martinez–Roiban–Zeng '18] 5-point example: why life isn't that easy

5-point example: why life isn't that easy

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● のへで

Tree-level statement

Reformulate tree-level statement:

$$A^{n,\mathbf{0}}_{\mathrm{YM}} = \mathsf{c}^{\mathsf{T}}\mathsf{D}\mathsf{n}, \quad \mathsf{D}_{ij} = rac{\delta_{ij}}{d_j},$$

 $i = 1, 2, \dots (2n-5)!!$

► Jacobi implies only (n − 2)! linearly independent, choose c_m and corresponding n_m:

$$c = Jc_m, n = Jn_m$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ のへで

where J is $(2n-5)!! \times (n-2)!$

Tree-level statement

Reformulate tree-level statement:

$$\mathsf{A}_{ ext{YM}}^{n,\mathbf{0}} = \mathsf{c}^{\mathsf{T}}\mathsf{D}\mathsf{n}, \quad \mathsf{D}_{ij} = rac{\delta_{ij}}{d_j},$$

 $i = 1, 2, \dots (2n-5)!!$

► Jacobi implies only (n – 2)! linearly independent, choose c_m and corresponding n_m:

$$c = Jc_m, \quad n = Jn_m$$

where J is $(2n-5)!! \times (n-2)!$

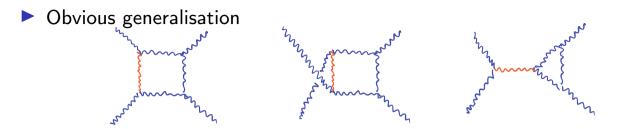

Non-trivial condition

$$\mathsf{A} = \mathsf{Pn} = (\mathsf{PJ})\mathsf{n}_m$$

where A is the (n-2)!-vector of colour-ordered partial amplitudes and P is an $(n-2)! \times (2n-5)!!$ matrix of signed propagators

det(PJ) = 0, but can solve via Gaussian elimination
A only (n-3)! independent partial amplitudes (BCJ relatione)

Going to loops

► Quickly becomes very difficult since CK duality relations become functional due the graph automorphisms ⇒ numerator ansatz:

- 1. The numerators are polynomials in momenta and polarization vectors
- 2. Power-counting matches those of Feynman-gauge Feynman rules
- 3. Diagrams with only trivalent vertices
- 4. Relabeling maps numerators to numerators
- 5. Diagram symmetries respected
- 6. The cuts of ansatz match a spanning set of unitarity cuts for Yang-Mills

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● の へ (?)

- 7. CK duality manifest in integrand
- 1-6 are are manifested by Feynman diagrams (3 requires aux fields)
- $6 \Leftrightarrow$ unitary theory + ansatz verification
- 1-7 cannot be satisfied at two loops: something has to give [Bern-Davies-Nohle '15]

Gravity

Einstein–Hilbert action: perturbatively expanded $g = \eta + \kappa h$

Invariant under gauge transformations (remnant of diffeo)

$$\delta_{ heta} h = rac{1}{\kappa} \mathcal{L}_{ heta}(g)|_{\kappa=0}, \qquad \delta_{ heta} h_{\mu
u} = 2
abla_{(\mu} heta_{\mu)} =
abla_{\mu} heta_{
u} +
abla_{
u} heta_{
u}$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Gravity

Einstein–Hilbert action: perturbatively expanded $g = \eta + \kappa h$

$$S_{\text{classical}}^{\text{EH}} = \frac{1}{2\kappa^2} \int \star R$$
$$\sim \int d^D x \left\{ \partial \partial hh + \kappa h \partial \partial hh + \kappa^2 h h \partial \partial hh + \kappa^3 h h h \partial \partial hh \cdots \right\}$$

Invariant under gauge transformations (remnant of diffeo)

$$\delta_{ heta} h = rac{1}{\kappa} \mathcal{L}_{ heta}(g)|_{\kappa=0}, \qquad \delta_{ heta} h_{\mu
u} = 2
abla_{(\mu} heta_{\mu)} =
abla_{\mu} heta_{
u} +
abla_{
u} heta_{

Colour-kinematics duality and double copy: recap

Two key ideas:

Realising CK duality and the double copy at the level of field theory:

Colour-kinematics duality and double copy: recap

Two key ideas:

Realising CK duality and the double copy at the level of field theory:

- CK duality manifesting actions and kinematic algebras
 [Bern-Dennen-Huang-Kiermaier '10; Tolotti-Weinzierl '13; Cheung-Shen '16; Luna-Monteiro-Nicholson-Ochirov-O'Connell-Westerberg-White '16]
 [Monteiro-O'Connell '11, '13;
 Bjerrum-Bohr-Damgaard-Monteiro-O'Connell '12; Fu-Krasnov '16;
 Chen-Johansson-Teng-Wang 19; Campiglia-Nagy '21; Cheung-Mangan '21;
 Ben-Shahar-Johansson '21; Brandhuber-Chen-Johansson-Travaglini-Wen '21...]
- Field theory product of BRST gauge theories and Lagrangian double-copy [Bern–Dennen–Huang–Kiermaier '10; Anastasiou–LB-Duff–Hughes–Nagy '14; LB '17; Anastasiou–LB–Duff-Nagy–Zoccali '18; LB–Jubb–Makwana–Nagy '20; LB-Nagy '20; BJKMSW '20, '21]

Today: the YM BV action admits a natural form of anomalous CK duality that immediately implies the double copy to all orders

Lighting overview

Step 1. Cubic tree-level off-shell CK duality manifesting Yang-Mills BRST-action:

$$S_{\text{BRST-CK}}^{\text{YM}} = \int C_{ij} c_{ab} A^{ia} \Box A^{ja} + F_{ijk} f_{abc} A^{ia} A^{jb} A^{kc}$$

Step 2. BRST-action double-copy:

$$S_{\rm DC} = \int C_{ij} C_{\tilde{\imath}\tilde{\jmath}} A^{i\tilde{\imath}} \Box A^{j\tilde{\jmath}} + F_{ijk} F_{\tilde{\imath}\tilde{\jmath}\tilde{k}} A^{i\tilde{\imath}} A^{j\tilde{\jmath}} A^{k\tilde{k}}$$

Step 3. Double-copy BRST operator:

$$(Q_{\mathsf{YM}}, ilde{Q}_{\mathsf{YM}}) \longrightarrow Q_{\mathsf{DC}} = Q_{\mathsf{diffeo}} + Q_{2\operatorname{-form}} + \mathsf{trivial} \; \mathsf{symmetries}$$

Step 4. Assuming tree-level physical CK duality, perturbative quantum equivalence:

$$Q_{\rm DC}^{2} = Q_{\rm DC}S_{\rm DC} = 0 \quad \Rightarrow \quad S_{\rm DC} \cong S_{\rm BRST}^{\mathcal{N}=0}$$

Corollary: Loop amplitude (integrands) computed from Feynman diagrams of $S_{\text{BRST-CK}}^{\text{YM}}$ manifest CK duality, *up to counterterms needed for unitarity*, and double-copy correctly to give amplitudes of $\mathcal{N} = 0$ supegravity

Step 1: Colour-Kinematic Duality Redux

Manifest physical tree-level CK duality

There is a YM action such that the Feynman diagrams yield amplitudes manifesting CK duality for tree-level amplitudes:

$$S_{\text{on-shell CK}}^{\text{YM}} = \sum_{n=2}^{\infty} \int \mathcal{L}_{\text{YM}}^{(n)} \sim A \Box A + \partial A A A + \frac{\Box}{\Box} A A A A + \frac{\partial^3}{\Box^2} A A A A A + \cdots$$

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● の へ ⊙

[Bern–Dennen–Huang–Kiermaier 1004.0693; Tolotti–Weinzierl 1306.2975]

Manifest physical tree-level CK duality

This can be "strictified" to have only cubic interactions through infinite tower of auxiliaries [BJKMSW '21]

$$\begin{split} S_{\text{on-shell CK}}^{\text{YM}} &= \operatorname{tr} \int d^{D} x \frac{1}{2} A_{\mu} \Box A^{\mu} + \frac{1}{2} g \partial_{\mu} A_{\nu} [A^{\mu}, A^{\nu}] \\ & \frac{1}{2} B^{\mu\nu\kappa} \Box B_{\mu\nu\kappa} - g (\partial_{\mu} A_{\nu} + \frac{1}{\sqrt{2}} \partial^{\kappa} B_{\kappa\mu\nu}) [A^{\mu}, A^{\nu}] \\ &+ \frac{1}{2} B^{\mu\nu\kappa} \Box B_{\mu\nu\kappa} - g (\partial_{\mu} A_{\nu} + \frac{1}{\sqrt{2}} \partial^{\kappa} B_{\kappa\mu\nu}) [A^{\mu}, A^{\nu}] \\ &+ C^{\mu\nu} \Box \bar{C}_{\mu\nu} + C^{\mu\nu\kappa} \Box \bar{C}_{\mu\nu\kappa} + C^{\mu\nu\kappa\lambda} \Box \bar{C}_{\mu\nu\kappa\lambda} + \\ &+ g C^{\mu\nu} [A_{\mu}, A_{\nu}] + g \partial_{\mu} C^{\mu\nu\kappa} [A_{\nu}, A_{\kappa}] - \frac{g}{2} \partial_{\mu} C^{\mu\nu\kappa\lambda} [\partial_{[\nu} A_{\kappa]}, A_{\lambda}] \\ &+ g \bar{C}^{\mu\nu} (\frac{1}{2} [\partial^{\kappa} \bar{C}_{\kappa\lambda\mu}, \partial^{\lambda} A_{\nu}] + [\partial^{\kappa} \bar{C}_{\kappa\lambda\nu\mu}, A^{\lambda}]) + \cdots \end{split}$$

[Bern–Dennen–Huang–Kiermaier '10]

Purely cubic Feynman diagrams \rightarrow

$$A_n^{\text{tree}} = \sum_{i} \frac{c_i n_i}{d_i} \quad \text{s.t.} \quad c_i + c_j + c_k = 0 \Rightarrow n_i + n_j + n_k = 0$$

Generalise to off-shell BRST CK duality

- Does not imply loop-level CK duality, e.g. unphysical off-shell modes propagate in the loops
- To lift to loop-level we should include off-shell unphysical/ghost modes in the external states so that we can glue trees into loops:

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● の へ ⊙

Generalise to off-shell BRST CK duality

- Does not imply loop-level CK duality, e.g. unphysical off-shell modes propagate in the loops
- To lift to loop-level we should include off-shell unphysical/ghost modes in the external states so that we can glue trees into loops:
 - 1. Longitudinal gluons gauge choice
 - 2. Ghosts BRST Ward identities
 - 3. Off-shell nonlocal field redefinitions (invisible on-shell)

▶ 3. \Rightarrow induces Jacobian counterterms that cancel spurious modes [BJKMSW '21]

▲□▶ ▲□▶ ▲ ■▶ ▲ ■ ● の Q @

Tree-level CK duality for longitudinal gluons

▶ Relax transversality $p_n \cdot \varepsilon_n \neq 0 \Rightarrow$ tree CK duality fails

▶ By analogy can compensate with new *non-zero* vertices [BJKMSW '20]:

Add them to the action without changing the physics [BJKMSW '20]

Tree-level onn-shell CK duality for longitudinal gluons and ghosts

Using Lagrangian perspective, all CK failures can simultaneously be compensated by terms of the form

 $(\partial \cdot A)Y[A]$

Tree-level onn-shell CK duality for longitudinal gluons and ghosts

Using Lagrangian perspective, all CK failures can simultaneously be compensated by terms of the form

$$(\partial \cdot A)Y[A]$$

Can add through the gauge-fixing functional
Gauge-fixing func. G[A]: $\partial \cdot A \mapsto G'[A] = \partial \cdot A - 2\xi Y$ Nakanishi-Lautrup b: $b \mapsto b' = b + Y$

Tree-level onn-shell CK duality for longitudinal gluons and ghosts

Using Lagrangian perspective, all CK failures can simultaneously be compensated by terms of the form

$$(\partial \cdot A)Y[A]$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ∽ � ♥ ♥

Can add through the gauge-fixing functional
Gauge-fixing func. G[A]: $\partial \cdot A \mapsto G'[A] = \partial \cdot A - 2\xi Y$ Nakanishi-Lautrup b: $b \mapsto b' = b + Y$

► Longitudinal CK duality ⇔ gauge choice [BJKMSW '20, '21]

Tree-level CK duality for ghosts

Use on-mass-shell BRST Ward identities

$$Q_{
m YM}^{
m lin}A_{
m phys}=0, \quad Q_{
m YM}^{
m lin}A_{
m f}=c, \quad Q_{
m YM}^{
m lin}b=ar{c}$$

Analogous to global SUSY Ward identities

$$0 = \langle 0 | [Q_{\mathrm{YM}}^{\mathrm{lin}}, O_1 \cdots O_n] | 0 \rangle$$

Transfers CK duality onto ghosts through

$$\mathcal{L}_{ extsf{ghost}}^{ extsf{YM}} = ar{c} Q_{ extsf{YM}} (\partial^{\mu} A_{\mu} - 2 \xi Y)$$

◆□▶ ◆□▶ ◆ 三▶ ◆ 三▶ 三三 - のへぐ

On-shell tree-level CK manifesting BRST action

Introduce new auxiliary gluons and ghosts [BJKMSW '20, '21]:

$$\begin{split} \mathcal{L}_{\mathsf{BRST CK-dual}}^{\mathsf{YM}} &= \frac{1}{2} A_{a\mu} \Box A^{\mu a} - \bar{c}_a \Box c^a + \frac{1}{2} b_a \Box b^a + \xi \, b_a \sqrt{\Box} \, \partial_\mu A^{\mu a} \\ &- \mathcal{K}_{1a}^{\mu} \Box \bar{\mathcal{K}}_{\mu}^{1a} - \mathcal{K}_{2a}^{\mu} \Box \bar{\mathcal{K}}_{\mu}^{2a} - g f_{abc} \bar{c}^a \partial^\mu (A_{\mu}^b c^c) \\ &- \frac{1}{2} B_a^{\mu\nu\kappa} \Box B_{\mu\nu\kappa}^a + g f_{abc} \left(\partial_\mu A_{\nu}^a + \frac{1}{\sqrt{2}} \partial^\kappa B_{\kappa\mu\nu}^a \right) A^{\mu b} A^{\nu c} \\ &- g f_{abc} \left\{ \mathcal{K}_1^{a\mu} (\partial^\nu A_{\mu}^b) A_{\nu}^c + [(\partial^\kappa A_{\kappa}^a) A^{b\mu} + \bar{c}^a \partial^\mu c^b] \bar{\mathcal{K}}_{\mu}^{1c} \right\} \\ &+ g f_{abc} \left\{ \mathcal{K}_2^{a\mu} \left[(\partial^\nu \partial_\mu c^b) A_{\nu}^c + (\partial^\nu A_{\mu}^b) \partial_\nu c^c \right] + \bar{c}^a A^{b\mu} \bar{\mathcal{K}}_{\mu}^{2c} \right\} + \cdots \end{split}$$

 Cubic Feynman diagrams yield CK dual tree amplitudes for physical gluons and unphysical longitudinal modes and ghosts (on-shell)

Lifting to off-shell CK duality

Relaxing on-shell to off-shell momenta CK duality violated by terms

 $p_i^2 F_i$

for each external momentum p_i (unphysical gluons and ghosts)

• Can compensate with terms $\propto F \Box \Phi$ with non-local field redefinition

 $\Phi \mapsto \Phi + F, \qquad \Phi \Box \Phi \mapsto \Phi \Box \Phi + F \Box \Phi + \cdots$

so that off-shell tree-level BRST CK duality is manifest \rightarrow loop CK duality [BJKMSW '21]

▲□▶ ▲□▶ ▲ ■▶ ▲ ■ ● の Q @

Lifting to off-shell CK duality

 $\Phi \mapsto \Phi + F, \qquad \Phi \Box \Phi \mapsto \Phi \Box \Phi + F \Box \Phi + \cdots$

so that off-shell tree-level BRST CK duality is manifest \rightarrow loop CK duality [BJKMSW '21]

▶ Price to pay: Jacobian determinants → counterterms ensuring unitarity

In this sense, this manifest loop CK duality is anomalous on the physical Hilbert space (but is exact on the complete pre-Hilbert space)

Perfect off-shell 'BRST-Lagrangian CK duality'

BV YM action with manifest off-shell CK duality

$$S_{\mathsf{BV}\,\mathsf{CK-dual}}^{\mathsf{YM}} = \int C_{ij} C_{ab} A^{ia} \Box A^{ja} + F_{ijk} f_{abc} A^{ia} A^{jb} A^{kc} + A^{+}_{ia} \left(Q^{i}{}_{j} A^{ja} + Q^{i}_{jk} f^{a}_{bc} A^{jb} A^{kc} \right)$$

Rendered cubic with infinite tower of aux. fields

$$A^{ia} = (A_{\mu}^{a}, b^{a}, \bar{c}^{a}, c^{a}, \underbrace{G_{\mu\nu\rho}^{a}, \bar{K}_{\mu}^{a}, \ldots}_{\text{auxiliaries}})$$

• c_{ab} , f^{abc} gauge group Killing form and structure constants

 C_{ij}, F^{ijk} are differential operators that satisfy the same identities as c_{ab}, f^{abc} as operator equations

$$c_{ab} = c_{(ab)} \qquad f_{abc} = f_{[abc]} \qquad c_{a(b}f_{c)d}^{a} = 0 \qquad f_{[ab|d}f_{c]e}^{d} = 0$$

$$C_{ij} = C_{(ij)} \qquad F_{ijk} = F_{[ijk]} \qquad C_{i(j}F_{k)l}^{i} = 0 \qquad F_{[ij|l}F_{k]m}^{l} = 0$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ ○○ のへで

Some comments

- Action has manifest CK duality
- The F_{ijk} are the structure constants of a kinematic Lie algebra mirroring the usual colour structure constants f_{abc}. Cf. [Monteiro–O'Connell '11, '13; Bjerrum–Bohr–Damgaard–Monteiro–O'Connell '12; Fu–Krasnov '16; Chen–Johansson–Teng–Wang 19; Campiglia-Nagy '21...]
- Corollary: loop amplitude integrands are CK dual automatically
- Anomalous, in a controlled manner, due to Jacobian counterterms that ensure (generalised) unitarity

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ∽ � ♥ ♥

Some comments

- Corollary: loop amplitude integrands are CK dual automatically
- Anomalous, in a controlled manner, due to Jacobian counterterms that ensure (generalised) unitarity
- Shift in point of view:
 - A consistent field theory formulation of CK duality
 - Anomaly: generalised unitarity proof of loop double copy doesn't go through, at least not straightforwardly
 - Departure from standard articulation of loop integrand CK duality: all desiderata except generalised unitarity
 - Latter replaced with off-shell CK duality of BV action (without Jacobian counterterms): alternative proof of double copy

BRST-Lagrangian double copy

► (Type I super Yang–Mills)² = Type IIA/B supergravity

 $A^{ia} = (A_{\mu}^{a}, \psi_{\alpha}^{a}, \text{ghosts}, aux)$

$$A^{ij} = (h_{\mu
u}, B_{\mu
u}, \phi, \Psi_{\alpha
u}, \Psi_{\mueta}, F_{\alphaeta}, \text{ghosts}, \text{aux})$$

Local NS-R sector susy follows from super Yang–Mills factors

$$\mathcal{Q}_{\alpha}A_{\mu}{}^{a} = \delta^{a}{}_{b}\gamma_{\mu\alpha}{}^{\beta}\psi_{\beta}{}^{b} + \cdots \longrightarrow \mathcal{Q}_{\alpha}h_{\mu\nu} = \gamma_{(\mu\alpha}{}^{\beta}\Psi_{\beta\nu)} + \cdots$$

Super $\eta, \bar{\eta}$ and Nielsen–Kallosh χ ghosts

 $ar{m{c}}\otimes\psi\ \sim\ ar{\eta}\ , \quad m{c}\otimes\psi\ \sim\ \eta\ , \quad m{b}\otimes\psi\sim\chi$

Similar for R–NS sector

Ramond-Ramond sector

• Double copy $\psi_{\alpha} \otimes \psi_{\beta}$ gives *field strengths* $F_{\alpha\beta}$, not potentials:

Representation theory

IIA: $\overline{16} \otimes 16 = 1 \oplus 45 \oplus 210$ IIB: $16 \otimes 16 = 10 \oplus 120 \oplus 126$

▲□▶ ▲□▶ ▲ ■▶ ▲ ■ ● ● ● ●

- The BRST transformation of the gluino has no linear contribution, $Q_{\text{BRST}}\psi = [c, \psi]$, so $\psi \otimes \psi$ cannot transform as a potential
- R-R background fields couple to worldsheet through field strengths

Ramond-Ramond sector

• Double copy $\psi_{\alpha} \otimes \psi_{\beta}$ gives *field strengths* $F_{\alpha\beta}$, not potentials:

Representation theory

IIA: $\overline{16} \otimes 16 = 1 \oplus 45 \oplus 210$ IIB: $16 \otimes 16 = 10 \oplus 120 \oplus 126$

- The BRST transformation of the gluino has no linear contribution, $Q_{\text{BRST}}\psi = [c, \psi]$, so $\psi \otimes \psi$ cannot transform as a potential
- R-R background fields couple to worldsheet through field strengths
- Type IIA/B action can be written in terms of field strengths, e.g. $F_2 \wedge \star F_2 + \tilde{F}_4 \wedge \star F_4 + B_2 \wedge \tilde{F}_4 + B_2 \wedge B_2 \wedge F_2 \wedge \tilde{F}_4 - \frac{1}{3}B_2 \wedge B_2 \wedge B_2 \wedge F_2 \wedge F_2$

Sen's mechanism from double copy Ramond-Ramond sector

Double copy R–R field strengths are *elementary* fields that correctly reproduce scattering amplitudes through their Feynman diagrams

$$\mathcal{L}_{\mathsf{R}-\mathsf{R}}^{\mathsf{DC}} = \overline{F}^{\alpha\beta} \Box^{-1} \partial_{\alpha}^{\alpha'} \partial_{\beta}^{\beta'} F_{\alpha'\beta'} + \cdots$$

$$\rightarrow -\frac{1}{2} \left(F \wedge \star F - \mathrm{d}F \wedge \star \Box^{-1} \mathrm{d}F \right) + \cdots$$

$$\rightarrow -\frac{1}{2} F \wedge \star F - \xi B \wedge \mathrm{d}F - \frac{1}{2} B \wedge \star \Box B + \cdots$$

$$\rightarrow -\frac{1}{2} F \wedge \star F - \xi B \wedge \mathrm{d}F + \frac{1}{2} \mathrm{d}B \wedge \star \mathrm{d}B + \cdots$$

- Lie algebras $\rightarrow L_{\infty}$ -algebras, first arose in string field theory:

Vector space	Graded vector space
$\mathfrak{g}=V_0$	$\mathfrak{L} = \bigoplus_n V_n$
Bracket	Higher brackets
$\mu_2 = [-, -]$	$\mu_1 = [-], \ \mu_2 = [-, -], \ \mu_3 = [-, -, -], \ldots$
Relations	Relations
Antisymmetry + Jacobi	Antisymmetry + homotopyJacobi

[Zwiebach '93; Hinich–Schechtman '93]

- Associative algebras $\rightarrow A_{\infty}$ -algebras [Stasheff '63]
- Commutative algebras $\rightarrow C_{\infty}$ -algebras [Kadeishvili '88]

• Chevalley–Eilenberg formulation of Lie algebra \mathfrak{g} with basis t_a :

$$\mathsf{CE}(\mathfrak{g}) = \overline{\mathcal{T}}(\mathfrak{g}[1]^*) := \bigoplus_{p=1}^{\infty} \mathsf{Sym}^p(\mathfrak{g}[1]^*)$$

$$Qt^a = -\frac{1}{2}f^a{}_{bc}t^bt^c, \qquad Q^2 = 0 \Leftrightarrow \text{Jacobi}$$

(ロ) (型) (E) (E) (E) (O)

• Chevalley–Eilenberg formulation of Lie algebra \mathfrak{g} with basis t_a :

$$\mathsf{CE}(\mathfrak{g}) = \overline{T}(\mathfrak{g}[1]^*) := \bigoplus_{p=1}^{\infty} \mathsf{Sym}^p(\mathfrak{g}[1]^*)$$

$$Qt^a = -\frac{1}{2}f^a{}_{bc}t^bt^c, \qquad Q^2 = 0 \Leftrightarrow \text{Jacobi}$$

• Chevalley–Eilenberg formulation of L_{∞} -algebra \mathfrak{L} with basis t_a :

$$\mathsf{CE}(\mathfrak{L}) = ar{\mathcal{T}}(\mathfrak{L}[1]^*)$$

 $Qt^a = -\sum_n \frac{1}{n!} \mu_n^a{}_{a_1 \cdots a_n} t^{a_1} \cdots t^{a_n}, \qquad Q^2 = 0 \Leftrightarrow \text{homotopy Jacobi}$

► Any BV field theory with operator Q_{BV} corresponds to an L_∞-algebra in the CE picture, see e.g. [Jurco-Raspollini-Saemann-Wolf '18]

▶ Yang-Mills theory $\mathfrak{L}^{\mathsf{YM}}$

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ □ のへで

- Homotopy Maurer-Cartan theory —> field strengths + gauge trans.
- ► Cartan-Killing form $\langle -, \rangle_{\mathfrak{g}} \rightarrow \text{cyclic structure } \langle -, \rangle_{\text{YM}}$ on \mathfrak{L}^{YM}

• BV action
$$\sim \sum \frac{1}{(i+1)!} \langle a, \mu_i(a, \ldots, a) \rangle$$

• Yang-Mills theory $\mathfrak{L}^{\mathsf{YM}}$

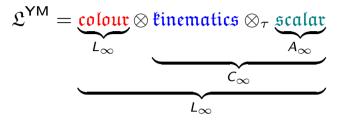

- Homotopy Maurer-Cartan theory —> field strengths + gauge trans.
- ► Cartan-Killing form $\langle -, \rangle_{\mathfrak{g}} \rightarrow \text{cyclic structure } \langle -, \rangle_{\text{YM}}$ on \mathfrak{L}^{YM}

• BV action
$$\sim \sum \frac{1}{(i+1)!} \langle a, \mu_i(a, \ldots, a) \rangle$$

- L_{∞} quasi-isomorphisms \longrightarrow physical equivalence (field redefinitions etc)
 - Strictification: $\mu_i = 0, i > 2 \rightarrow$ cubic theory
 - Minimal model: $\mu_1 = 0 \rightarrow$ tree scattering amplitudes
 - Cf. [Jurčo-Raspollini-Saemann-Wolf '18; Jurčo-Macrelli-Saemann-Wolf '19]

Colour-Kinematic-Scalar Factorisation of Yang-Mills

• $\mathfrak{L}^{\mathsf{YM}}$ factorises into colour \otimes kinematics \otimes_{τ} scalar

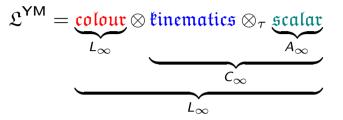

[BLKMSW '21]

Michel Reiterer [1912.03110]

- ▶ Proof of on-shell tree-level CK duality for physical gluons via BV_{∞}^{\Box} -algebra!
- Relies on the existence of a degree -1 unary map h on Zeitlin-Costello BV complex for Yang–Mills (think order formulation with A, F⁺) satisfying

 $h^2 = 0$, $dh + hd = \Box$ (plus some other conditions)

- ▶ *h* exists and is a second-order derivation up to homotopy \Rightarrow
 - BV_{∞}^{\Box} -algebra on Zeitlin-Costello BV complex
 - On-shell tree-level CK duality for physical gluons

Michel Reiterer [1912.03110]

- ▶ Proof of on-shell tree-level CK duality for physical gluons via BV_{∞}^{\Box} -algebra!
- Relies on the existence of a degree -1 unary map h on Zeitlin-Costello BV complex for Yang–Mills (think order formulation with A, F⁺) satisfying

 $h^2 = 0$, $dh + hd = \Box$ (plus some other conditions)

- h exists and is a second-order derivation up to homotopy \Rightarrow
 - BV_{∞}^{\Box} -algebra on Zeitlin-Costello BV complex
 - On-shell tree-level CK duality for physical gluons
- ▶ Very special: only D = 4, no loop desiderata (ghosts, gauge-fixing)
- ► A little mysterious: BV[□]_∞-algebra generalise famous BV_∞-algebras (homotopy BV-algebras [Galvez-Carrillo–Tonks–Vallette '09]), where e.g.

 $\Delta^2 \Box = (\mathsf{id} + \sigma_{(123)} + \sigma_{(123)}^2)(\mathsf{id} \otimes \Delta \Box) - (\mathsf{id} + \sigma_{(123)} + \sigma_{(123)}^2)(\mathsf{id} \otimes \mathsf{id} \otimes \Box)$

The homotopy algebra of CK duality [BJKMSW 'to appear 21]

The homotopy algebra of CK duality [BJKMSW 'to appear 21]

▶ BRST-Lagrangian CK duality $\Leftrightarrow BV^{\Box}$ -algebra, cf. [Getzler '93]

 $\mathfrak{L}^{\mathsf{YM}} = \mathfrak{g} \otimes \underbrace{\mathfrak{kinematics}}_{\mathfrak{Kin} \equiv BV^{\Box}-\mathsf{algebra}}$

► BV[□]-algebra comes with two products - · - and [-, -] and three unary operators

$$d^2 = h^2 = 0, \quad dh + hd = \Box$$

- The homotopy algebra of CK duality [BJKMSW 'to appear 21]
 - ▶ BRST-Lagrangian CK duality $\Leftrightarrow BV^{\Box}$ -algebra, cf. [Getzler '93]

$$\mathfrak{L}^{\mathsf{YM}} = \mathfrak{g} \otimes \underbrace{\mathfrak{kinematics}}_{\mathfrak{Kin} \equiv BV^{\square} - \mathsf{algebra}}$$

► BV[□]-algebra comes with two products - · - and [-, -] and three unary operators

$$d^2 = h^2 = 0, \quad dh + hd = \Box$$

- The homotopy BV^{\Box} -algebra depends on the ambient category
- In the usual category of chain complexes d is privileged

The homotopy algebra of CK duality [BJKMSW 'to appear 21]

▶ BRST-Lagrangian CK duality $\Leftrightarrow BV^{\Box}$ -algebra, cf. [Getzler '93]

 $\mathfrak{L}^{\mathsf{YM}} = \mathfrak{g} \otimes \underbrace{\mathfrak{kinematics} \otimes_{\tau} \mathfrak{scalar}}_{\mathfrak{Kin} \equiv BV^{\Box} \text{-algebra}}$

BV[□]-algebra comes with two products - · - and [-, -] and three unary operators

$$d^2 = h^2 = 0, \quad dh + hd = \Box$$

- The homotopy BV^{\Box} -algebra depends on the ambient category
- In the usual category of chain complexes d is privileged
- Introduce symmetric monoidal category of Hodge complexes (modules over twisted Hopf algebras with central element □)

$$d^2 = h^2 = 0, \quad dh + hd = \Box$$

 $Coassociativity \Rightarrow the seven-term identity$

In this category, both d and h are a part of the ambient structure

The homotopy algebra of CK duality

► Homotopy algebra: $BV_{\infty/Hdg}^{\Box}$ -algebra

Corresponds to integrating out auxiliary fields

▶ Homotopy relations of $BV_{\infty/Hdg}^{\Box}$ -algebra \leftrightarrow kinematic Jacobi relations

The homotopy algebra of CK duality

► Homotopy algebra: $BV_{\infty/Hdg}^{\Box}$ -algebra

Corresponds to integrating out auxiliary fields

- ▶ Homotopy relations of $BV_{\infty/Hdg}^{\Box}$ -algebra \leftrightarrow kinematic Jacobi relations
- Computational efficiency:
 - Purely tree-level calculations
 - One identity at any order (the rest follow axiomatically)

 $\sum_{p+q=n+2} n$ -point tree with two internal (*p*-ary and *q*-ary) vertices

= *n*-point tree with one internal (*n*-ary) vertex

But, work with Feynman diagrams - marry with on-shell methods?

Future work

▶ AdS background [Zhou '21; Diwakar-Herderschee-Roiban-Teng '21 ...] → Hopf algebra of universal enveloping algebra of AdS isometries

► Bagger-Lambert-Gustavsson CK duality [Bargheer-He-McLoughlin '12; Huang-Johansson '12] → m-ary BV[□] operads

▶ Matter coupling [Johansson-Ochirov '14] \rightarrow many-sorted BV^{\sqcup} operads

String theory (modular envelope over) $BV_{\infty}^{L_0}$

$$\{d,h\} = \Box \longrightarrow \{Q,b_0\} = L_0$$

Cf. BV_{∞} structure on TVOA [Galvez-Carrillo–Tonks–Vallette '09] lifting the BV-algebra structure on the BRST (co)homology [Lian-Zuckerman '93]
